LINKEDIN HEADLINE

Data Analyst & AI/ML Engineer | Insurance Fraud Detection | Full-Stack | Flutter . FastAPI . XG

Formula: [What you do] | [Specialisation] | [Key tools] | [Programme signal]

ABOUT SECTION

I build systems that turn messy operational data into decisions that protect money, time, and people.

Most recently: co-built ClaimGuard - an AI-powered insurance fraud detection platform for the Kenyan motor insurance market. It processes claims in under 30 seconds (down from 5-15 days), catches 81% of fraud, and projects KES 148 million in annual savings for a mid-size insurer. The system is production-ready: FastAPI backend, XGBoost + SHAP explainability, network/ring detection, HITL review queue, and a full Next.js frontend.

Before that I was the sole Flutter mobile developer on a live banking platform - shipping biometric auth, offline-first sync, a follow-up calendar, and push notifications to production. And built an AI HSE safety platform with a Groq LLM reporting agent that generates 15-section regulatory-grade PDF reports.

What I work with:

- > Machine learning: XGBoost, scikit-learn, SHAP, SMOTE, pandas, NumPy
- > Backend: FastAPI, Flask, Spring Boot, PostgreSQL, Celery, Docker
- > Frontend/Mobile: React, Next.js 14, Flutter, TypeScript, Tailwind
- > Operational analytics: ETL pipelines, Streamlit dashboards, Plotly

What I care about:

Fraud that gets caught before it costs. Equipment that gets fixed before it fails. Data that tells you the truth fast enough to act on it.

Currently a Software Engineering Intern at E&M Techhouse under the PLP INUKA Programme, shipping across six live products. Open to data analyst, ML engineer, and operational intelligence roles.
